

April 28, 2022

The Honorable Patrick Leahy
Chairman
Committee on Appropriations
U.S. Senate
Washington, DC 20510

The Honorable Richard Shelby
Vice Chairman
Committee on Appropriations
U.S. Senate
Washington, DC 20510

The Honorable Rosa DeLauro
Chair
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Kay Granger
Ranking Member
Committee on Appropriations
U.S. House of Representatives
Washington, D.C. 20515

Dear Chairman Leahy, Vice Chairman Shelby, Chair DeLauro, and Ranking Member Granger:

As you consider appropriations for Fiscal Year (FY) 2023, the undersigned 288 national, state, and local medical, public health, and research organizations write to ask you to **provide \$35 million for the U.S. Centers for Disease Control and Prevention (CDC) and \$25 million for the National Institutes of Health (NIH) to conduct public health research into firearm morbidity and mortality prevention.** We also encourage Congress to explore opportunities for building out and further supporting this research at all other appropriate agencies, to ensure that federally funded research can explore the full scope of this public health issue. A recent, rigorous report estimated that the federal government will need to spend approximately \$100 million per year to fully fund a comprehensive research agenda on reducing gun violence.¹

In the midst of the COVID-19 pandemic, communities across the U.S. continue to suffer from the public health crisis of firearm-related injuries and deaths. In 2020, the most recent year for which we have data, firearm-related injuries led to 45,222 fatalities,² an increase of nearly 15% over the previous year. A public health approach is urgently needed to promote health equity and address the disproportionate burden of firearm injuries on communities of color and to understand the strategies that can be most effective in preventing suicides, unintentional injuries, and interpersonal violence. The foundation of this approach is rigorous research that can accurately quantify and describe the facets of an issue and identify opportunities for reducing its related morbidity and mortality.

We would like to thank Congress for its continued support for this public health research in FY22, providing \$12.5 million each to the CDC and NIH for the third consecutive fiscal year. These initial investments are a crucial step toward applying a public health approach to increasing gun safety and reducing firearm-related injuries and deaths, and we are excited to see these funds contributing to important research projects that are now underway. The CDC has made 18 awards for two- and three-year projects to improve scientific understanding of firearm-related violence and to rigorously evaluate the effectiveness of prevention strategies.³ Several of these projects will conclude this year and provide insights on how to reduce suicide risk in U.S. Army soldiers and veterans and how to improve efforts to reduce urban firearm injuries, among other topics. The NIH is funding research on the determinants of firearm injury, the identification of those at risk, and the evaluation of innovative interventions.^{4,5}

These initial investments are important, but increased funding is still needed to overcome the decades-long lack of federal funding that set back our nation's response to the public health issue of firearm-related morbidity and mortality. The agencies have received many more proposals than they are able to fund, and additional funding can generate research into important issues, such as the best ways to prevent unintended firearm injuries and fatalities among women and children; the most effective methods to prevent firearm-related suicides; the measures that can best prevent the next shooting at a school or public place; and numerous other vital public health questions.

Our groups strongly urge Congress to increase the funding level to \$35 million for the CDC and \$25 million for the NIH for firearm morbidity and mortality prevention research as part of FY 2023 appropriations. Continued and expanded funding could support the creation of additional, large, multi-year studies and accelerate the rebuilding of a research community that shrank in the decades before Congress restored this federal funding. Robust and sustained research on motor vehicle crashes and subsequent legislation has helped save hundreds of thousands of lives through public health interventions, including seat belts and other safety features. The same approach can help reduce firearm-related injuries in our communities, including ensuring that the CDC and NIH are able to adequately fund non-biased, evidence-based research into this public health priority. Exploring additional agencies to fund for this work would also ensure this research can address all necessary areas of inquiry and move us closer to the approximately \$100 million necessary annually to fully support this research field.

Our organizations stand ready to work with you to support this critical effort. Thank you for your consideration.

Sincerely,
